Using the Remote Control

Keep in mind the following when using the remote control:

- Make sure that there is no obstacle between the remote control and the remote sensor on the unit.
- Use within the operating range and angle, as shown.

Loading the Batteries

Cautions On Batteries

- Use "AA" (R6P) batteries in this remote control unit.
- Replace the batteries with new ones approximately once a year, though this depends on the frequency with which the remote control unit is used.
- If the remote control unit does not operate close to the main unit, replace the batteries with new ones, even if less than a year has passed.
- The included batteries are only for verifying operation. Replace them with new batteries as soon as possible.
- When inserting the batteries, be careful to do so in the proper direction, following the ⊕ and ⊖ marks in the remote control unit's battery compartment.
- To prevent damage or battery fluid leakage:
  - Do not use a new battery with an old one.
  - Do not use two different types of batteries such as alkaline and manganese.
  - Do not short-circuit, disassemble, heat or dispose of batteries in flames.
- Remove the batteries when not planning to use the remote control unit for a long period of time.
- If the batteries should leak, carefully wipe off the fluid from the inside of the battery compartment, then insert new batteries.

Description - Rear Panel

**1. DIGITAL OUT Jacks**

Use either an optical or coaxial digital cable to connect to an AV amplifier.

**2. HDMI OUT Terminal**

Use an HDMI connection cable (commercially available) to connect to a display with an HDMI terminal.

**3. 2CH AUDIO OUT Jacks**

Connect to the Audio input jacks of your TV or Stereo system.

**4. VIDEO OUT Jack**

Use a video cable to connect the jack to the Video input jack of your TV or Stereo system.

**5. COMPONENT VIDEO OUT Jacks**

Use these jacks if you have a TV with Component Video input jacks. These jacks provide C<sub>R</sub>/P<sub>R</sub>, C<sub>B</sub>/P<sub>B</sub> and Y video. Component Video provides the best picture quality.

**6. S-VIDEO OUT Terminal**

Use the S-Video cable to connect this terminal to the S-Video input terminal of your TV for higher picture quality.

**7. A/V EURO CONNECTOR**

Connect to the 21-pin Scart jack of a TV. (The sound of Super Audio CD is not output.)

**8. 5.1CH AUDIO OUT Jacks**

Use Audio cables to connect these jacks to the 5.1 ch Audio input jacks of your AV amplifier with 5.1-channel input jacks.

**9. REMOTE CONTROL IN/OUT Jacks**

By connecting this DVD player to another Marantz audio component using a supplied Remote control bus cable, you can remotely operate the components as a signal system.

**10. REMOTE CONTROL EXTERNAL / INTERNAL Switch**

Set this switch to "INTERNAL" when using this DVD player independently. If you use this DVD player in a system with a Marantz receiver equipped with a remote sensor, set the switch to "EXTERNAL".

**NOTES:**

- Be sure not to use both the A/V EURO CONNECTOR and COMPONENT VIDEO OUT jacks for video output at the same time.
- When changing the "VIDEO OUT" setting ("SCART", "COMPONENT INTERLACE" or "COMPONENT PROGRESSIVE"), connect to a Video jack or an S-Video terminal on the TV. If the setting is changed, for example, to "COMPONENT INTERLACE" or "COMPONENT PROGRESSIVE" while the A/V EURO CONNECTOR is connected to the TV, a distorted video signal may be output.
- When there is video output from the HDMI OUT terminal, no progressive signal is output from the COMPONENT VIDEO OUT jacks.
- When connecting to a component with a remote sensor, be sure to connect the REMOTE CONTROL IN jack of this DVD player to the REMOTE CONTROL OUT jack of the component.
- When connecting to a component which is not equipped with a remote sensor, be sure to connect the component to the REMOTE CONTROL OUT jack of this DVD player.

**Selecting Progressive Scan (625p <576p> or Interlaced 625i <576i>) Playback**

- If your TV is compatible with progressive scanning (625p <576p>), connect the TV to the COMPONENT VIDEO OUT jacks of the DVD player and set "VIDEO OUT" to "COMPONENT PROGRESSIVE" in the display setting. Next, set your TV to the progressive scan mode. Refer to page 28 for instructions on changing the display setting.
- If your TV is not compatible with progressive scan, set "VIDEO OUT" to "COMPONENT INTERLACE".
- Use a commercially available adaptor if the Video input jacks of your TVs or monitors are the BNC type.

**What is Progressive Scanning?**

- Unlike conventional interlace scanning, the progressive scan system provides less flickering and images in higher resolution than that of traditional (625i/576i) television signals.

The DCDi (Directional Correlational Deinterlacing) system of this DVD player produces smooth and natural video images, even if really dynamic, by eliminating the jagged edges.  
 \*\*"DCDi" is a trademark of Faroudja, a division of Genesis Microchip Inc.

The following show examples of connections commonly used to connect the DVD player to the TV and other components.  
 If using this DVD player to play back a DVD in a Dolby Digital 5.1 channel surround or DTS surround format, the DVD player outputs a Dolby Digital or DTS data stream from its OPTICAL or COAXIAL DIGITAL OUT jacks. By hooking the player up to a Dolby Digital or DTS decoder, you can enjoy a more convincing, realistic ambience with powerful and high-quality surround sound of a professional standard, which can be heard in movie theatres. Use an audio coaxial digital or optical cable (commercially available) for the audio connections.

**NOTES:**

- Be sure to turn off the power of all components in the system before connecting another component.
- Refer to the instruction manuals for your TV, Stereo system and any other components to be connected to the DVD player.

DIGITAL OUT

- **Method 1** DVD Player + Stereo system
- **Method 2** DVD Player + Dolby Digital decoder, DTS decoder or MPEG decoder

**NOTES (for method 2 only):**

- When using an AV amplifier with a built-in decoder (Dolby Digital, DTS, or MPEG decoder) as shown in the Method 2, set "DOLBY DIGITAL", "DTS" or "MPEG" to "BITSTREAM" accordingly for audio output in the setup menu (refer to pages 28-29). Set it to "PCM" for the decoder that is not used currently. Playing a DVD using incorrect settings may generate noise distortion, and may also damage the speakers.
- The audio source on a disc in a Dolby Digital 5.1 channel surround format cannot be recorded as digital sound by an MD deck or DAT deck.
- Set "DOLBY DIGITAL", "DTS" and "MPEG" to "PCM" for audio output in the setup menu for connecting to an MD deck or DAT deck (refer to pages 28-29).
- Harsh noise that could harm your ears or the speakers is generated when a DVD recorded in DTS is played while using a decoder, etc., that is not DTS-compatible.
- When playing back a copyright-protected over 96kHz (88.2kHz) PCM DVD, the digital sound will be down-sampled at 48kHz (44.1kHz), even if you set "DOWN SAMPLING" to "OFF" (refer to page 28).
- Super Audio CD sound is not output from the DIGITAL OUT.

**Optical cable (not supplied)**

- Optical cable (not supplied) may be damaged when bent at sharp angles. Ensure cables are coiled in loops with a diameter of 15 cm or more when storing them.
- Use a cable which is 3m or shorter.
- Insert cable plugs firmly into the connectors when making connections.
- If a plug has dust or is dirty, clean it with a soft cloth before inserting it into a connector.

**Connection to 5.1-channel Surround Sound System**

Analog 5.1-channel audio signals can be output from the DVD player. The multichannel audio signals recorded in packed PCM can be played back when an AV amplifier equipped with analog 5.1-channel audio inputs is connected.

**NOTES:**

- For 5.1-channel connections, set “ANALOG AUDIO” to “5.1CH” in the setup mode and adjust “SPEAKER SIZE”, “DELAY TIME” and “BALANCE” settings (refer to pages 29-30).
- You can enjoy high-quality analog sound by cutting off analog video signals. Press the **AUDIO EX.** button on the front panel.
- When using the HDMI connection, signals from the 5.1CH AUDIO OUT jacks can be limited in some cases. If it occurs, set “HDMI AUDIO” to “OFF” to output the signals (refer to pages 28-29).

“DTS” and “DTS Digital Surround” are registered trademarks of Digital Theater Systems, Inc.

Connection to a TV (for Video)

- **Method 1** DVD Player + TV with Video input jack
- **Method 2** DVD Player + TV with S-Video input terminal
- **Method 3** DVD Player + TV with AV1 (21-pin Scart) jack or Component Video input jacks

**NOTES:**

- Connect the DVD player directly to a TV. If the Audio/Video cables are connected to a VCR, pictures may be distorted due to the copy protection system.
- S-Video output terminal  
The video signals are divided into colour (C) and brightness (Y) signals, achieving a clearer picture.  
If the TV is equipped with an S-Video input terminal, we recommend connecting it to this unit's S-Video output terminal using a commercially available S-Video connection cord.

**HOW TO CONNECT TO A TV WITHOUT AUDIO/VIDEO INPUT JACKS**

If your TV does not have RCA type audio and video input jacks it is still possible to connect this DVD player to your TV's 75-ohm coaxial antenna terminal using an optional Stereo Audio/Video RF Modulator (not included). Connect the audio and video outputs of the DVD player to the audio and video inputs on the RF Modulator, and then connect the coaxial output of the RF Modulator (usually marked "TO TV") to the 75 ohm coaxial antenna terminal on your TV. Follow the instruction supplied with the RF Modulator for more details.

If your TV's 75 ohm coaxial antenna terminal is already occupied by an antenna or cable box connection, remove that cable from your TV's antenna terminal and reconnect it to the coaxial antenna input terminal of the RF Modulator (usually marked "ANT IN"), then connect the RF modulator to your TV's antenna terminal as described above.

**NOTE:**

- The picture quality from DVD discs will not be as good if the DVD player is connected to the TV's antenna terminal through an RF Modulator.

## CONNECTIONS

### Connection to a TV with an HDMI Terminal

A simple 1-cable connection (using a commercially available cable) with a device having an HDMI (High-Definition Multimedia Interface) terminal allows digital transfer of the digital images of DVD-Video and other sources, DVD-Video, and the multi-channel sound of DVD-Audio.

\*2 Sounds recorded on the MULTI-CH/2CH AREA of Super Audio CDs are not output.

### Copyright protection system

To play back the digital video images of a DVD via an HDMI connection, it is necessary that both the player and the display equipment (or an AV amplifier) support a copyright protection system called HDCP (High-bandwidth Digital Content Protection). HDCP is copy protection technology that comprises data encryption and authentication of the connected AV equipment.

This player supports HDCP. Please read the operating instructions of your display equipment (or AV amplifier) for more information.

### NOTES:

- When using an HDCP-incompatible display equipment, the image will not be viewed properly.
- Some devices that support HDMI can control other devices via the HDMI terminal; however, this player cannot be controlled by another device via the HDMI terminal.
- The audio signals from the HDMI terminal (including the sampling frequency, the number of channels and bit length) may be limited depending on the disc or the connected equipment.
- When playing a Super Audio CD with an HDMI connection, audio signals cannot be transferred beyond the CD AREA. Make an analog connection for this.
- The HDMI AUDIO setting cannot be changed when the connected device is not compatible with HDMI audio, or no device compatible with HDMI audio is connected to this player.
- Even when the connected device is compatible with HDMI audio, the HDMI AUDIO setting is not possible if the power of the device is turned off or the HDMI output mode is set to "hdOFF".

## Basic Playback

## Getting started

- Turn on the power of the TV, amplifier and any other components which are connected to the DVD player.
- Make sure the TV and audio receiver (commercially available) are set to the correct channel.

- 1 Press the **POWER** button.
  - "P-ON" will appear briefly on the display panel.
- 2 Press the **OPEN/CLOSE** button to open disc loading tray.
- 3 Place the disc in the tray, with the label facing up.
- 4 Press the **PLAY** button.
  - The tray will close automatically, and playback will start from the first chapter or track of the disc. If the playback does not start automatically, press the **PLAY** button.
  - When you play back the DVD with a title menu, it may appear on the screen. In this case, refer to "Title Menu".
- 5 Press the **STOP** button to stop playback.

## NOTES:

- A "prohibited icon" may appear at the top-right on the TV screen during operation, warning that a prohibited operation has been done to the DVD player or the disc.
- With DVDs that use some titles for playback programme signals, playback may start from the second title, or it may skip these titles.
- During the playback of two layered disc, pictures may stop for a moment. This happens when the 1st layer switches to the 2nd layer. This is not a malfunction.
- The operation may vary when you playback DVDs with disc menu or Video CDs with PBC. Refer to the manual accompanying the disc for details.
- A DVD-RW disc recorded in the VR mode may freeze momentarily during playback depending on how the playlist was made and edited (deleted titles, repeated recording).

## CANCELLING AND CALLING BACK THE PBC FUNCTION

## VCD
